Project Name	Project –Smart waste Management System
Maximum Marks	2 Marks

Customer Problem Statement Template:

Problem which we have chosen is to integrate the waste management system together in order to make our surroundings clean and green.

This project aims to control the proper disposal of urban waste, which is the main cause of ill health among the citizens.

This project covers other public facilities such as public water and restrooms, and deals with their management.

This project elevates the lifestyle of the citizens and focuses primarily on waste management and disposal from the perspective of an urban community.

Is the level and quality of the solid waste handling and disposal practices and the common public facilities in India at par with the recommended standards as per the UN convention?

Self reflective questions for deeper understanding:

- Are there any effective, centralised and integrated working solutions when it comes to managing waste?
- Do the current practices need a revamp?
- Are we lagging behind the fast emerging technologies when compared to the world countries?

Example:
